The AI+Human Platform for Work

An invitation to owner-operators —
build something bigger, together.

AI is Reshaping Staffing. You Don't Have to Sell to Survive It.

Margin compression and automated funnels are the new reality. Liquidating your agency isn't the only exit. There is a third option: transforming your business via a strategic merger with a tech-enabled platform.

The Choice: Liquidate or Compound?

You've built the hardest part—clients, revenue, and reputation. Merging into a software platform shifts that hard-earned revenue into recurring, subscription models, fundamentally altering your valuation ceiling.

The Valuation Chasm: EBITDA vs. Revenue

Using an example of \$10M in revenue. A staffing agency sells for 4–6x EBITDA. A tech enabled platform sells or raises capital on valuations of 7–19x top-line revenue, in rare cases even more. The goal is to move the blended valuation strictly toward the software end.

Traditional Agency Value
Optimistic 15% margin = \$1.5M in EBITDA
x 5x multiple = \$7.5M valuation

**The 9X+
difference**

Tech-Enabled Platform Value

\$10M in revenue x 7x = \$70M valuation (Transformative)
Once revenue is productized — recurring, talent wherever possible
is subscription-based, member fees charged to jobseekers.

The Anatomy of the Arbitrage

	The Pure Agency	The Tech-Enabled Platform
Core Offering	Transactional Placement	Productized Platform Ecosystem
Revenue Model	One-off / Project-based	Recurring / SaaS Subscription
Valuation Basis	EBITDA (Bottom Line)	Top-Line Revenue
Standard Multiple	4–8x	7–19x
Exit Potential	Linear (Capped)	Exponential (Compound)

This Isn't Theory. This is the Market Reality.

	Year	Rev	Val	Multiple
 Superside	2022	\$25M	\$530M	~21x
 Remote	2018	~\$10M	~\$76M	~7.6x (Our Conservative Anchor)
 fiverr	2021	Modest	\$95M	Acquired

Platforms bundling human talent into software get valued like software. We anchor our projections conservatively to Remote's ~7.6x workforce platform multiple.

How the Multiple is Earned, Not Faked

The multiple isn't a relabeling trick. It's earned when the work becomes productized: transactional revenue becomes recurring revenue, and recurring revenue is what the market pays software multiples for.

$$\left(\text{Transactional Staffing} \times \text{EBITDA Multiple} \right) + \left(\text{Recurring Platform Revenue} \times \text{Software Multiple} \right) = \text{Exponential Enterprise Value}$$

The Pre-Built Engine: Merge Instead of Building

Building this infrastructure takes years and millions you shouldn't have to spend. Ours is live, tested, and ready to ingest your operations.

The Architects: Executing the Roll-Up Playbook

Two tier-one operators who each could have built something smaller alone—combined, on purpose, into Esteemed to build a multi-billion dollar platform.

The Blueprint: A Platform Worth Billions in Five Years

Context: 3 Partners/Year | Starting at 70% recurring staffing / 30% software.

Partner Scale	Year-5 Rev	Year-5 Platform Value
Smaller Partners (~\$10M ea)	~\$175M	~\$1.0B
Mid-size Partners (~\$25M ea)	~\$435M	~\$2.5B
Larger Partners (~\$40M ea)	~\$700M	~\$3.9B

Valued on the blend. At that scale, the choice is ours: go public or keep compounding.

The Offer, Plainly.

**A meaningful share of something exponential beats all of something capped.
If you are ready for the next step in your journey and owning a stake in something with exponential growth potential valued as an innovation leader, let's talk.**
